**PREFACE**

The Integrated Agricultural Survey Report 1997/98 is the third in the series of related publications since 1995/96. The word Integrated has been used as it encompasses many surveys in one. Previous surveys were referred to as Expanded Agricultural Surveys to mean the continuation of the agricultural sample censuses of 1993/94 and 1994/95.

The report contains information pertaining to Agricultural Household and Holding Characteristics, Crop and Yield Estimates, Sales of Agricultural Products and Agricultural Inputs. It also, contains information on the Survey Operations and Procedures.

The report is a product of co-ordination and collaboration between the Ministry of Agriculture and Cooperatives and National Bureau of Statistics, which started in 1993/94.

Sincere gratitude goes to the World Bank for financing the activities of the Survey through the Agricultural Sector Management Project and the Food and Agricultural Organization of the United Nations for providing technical assistance.

Acknowledgment goes to the staff of the Ministry of Agriculture and Cooperatives, National Bureau of Statistics and the International Consultants for their committed work, which made the 1997/98, survey a success.

**Cletus P. B. Mkai**  
**The Director General**  
**National Bureau of Statistics**  
**May 2000**

## **1.1 Introduction**

The 1997/98 Integrated<sup>1</sup> Agricultural Survey report gives a description of survey operations undertaken in Tanzania Mainland. The survey was conducted in selected 540 villages distributed throughout the country. The enumerators of this survey were the resident extension officers of the respective villages, who were supervised by District, Regional and Headquarters supervisors. The same sample that was used in the previous Sample Censuses and annual Agricultural surveys was also used in the 1997/98 Integrated Agricultural Survey.

The report has been organized in five parts. The first part gives the background of the survey. The second describes the estimation procedures. The third gives the way data was processed, the fourth gives a detailed survey result and the last is survey evaluation.

The survey duration covers the agricultural season from October 1997 to September 1998. During implementation of this survey both agricultural seasons were covered namely Short rains (Vuli) season and long rains (Masika) season. Masika season covers the whole country and Vuli season covers mainly 11 regions of Tanzania Mainland. The questionnaires, forms and tables of results are attached as appendices to this report.

## **1.2 Survey Undertaking**

Before 1983/84, the Ministry of Agriculture and Co-operative has been collecting agricultural statistics using subjective<sup>2</sup> methods. Data flow was from the village to the MAC headquarters through district and regional offices.

From 1983/84, the Ministry of Agriculture and Co-operatives with technical assistance from FAO started to apply objective methods<sup>3</sup> of data collection

---

<sup>1</sup> The word "Integrated" is used to mean the amalgamation of different surveys into one survey during planning and execution.

<sup>2</sup> Means that the quality of data collected depends on personal judgement of the collector (Sometimes called eye estimate), no specified method is used.

<sup>3</sup> Objective method means that all fields operated by the sampled households are measured for the crops planted. Field identification is done and the member of the selected field confirms type of crop planted. General shape of the field is identified. Many fields are irregular in shape, and give and take away method is applied in order to approximate the fields with a regular polygon. Sketch is then drawn on a notebook before the actual measurements. With the help of compass and tape measure the area is measured. Objective crop cutting method is used to estimate the yield of a crop by harvesting randomly two located sample plots in selected fields. For estimation of the

These methods were pilot tested in two regions of Morogoro and Shinyanga and later extended to the other regions after being found successful.

In 1993/94 the National Sample Census of Agriculture was conducted. The Ministry of Agriculture and Co-operatives undertook the Sample Census in collaboration with the National Bureau of Statistics (NBS) with technical assistance from FAO. The Sample Census was implemented using objective methods. Following the successful implementation of the 1993/94 and 1994/95 NSCA, MAC and NBS implemented 1995/96 and 1996/97 Expanded Agricultural Surveys.

The 1997/98 Integrated Agricultural Survey was implemented using the same methodologies; procedures and infrastructure used to undertake NSCA and expanded surveys. The survey was designed in such a way that elements of sustainability and cost-effectiveness were considered.

### **1.3 Objectives of the Survey**

The 1997/98 IAS had six major objectives. These were to:

- Obtain time series data for improving current food and agricultural data at national and regional levels;
- Obtain basic data to be utilized in the preparation, formulation of policies and implementation of agricultural plans;
- Obtain basic statistics for comparing between population increase and development of the agriculture sector;
- Obtain data which will help in carrying out future surveys and censuses;
- Contribute input for an agricultural statistical databank;
- Obtain detailed data on various inputs used for agricultural production, such as type of fertilizers, pesticides, improved seeds, etc.

In addition to these stated objectives, there was an implicit and yet important objective of developing a national capability to build, manage and sustain an efficient agricultural statistical system.

### **1.4 Survey Coverage**

#### **1.4.1 Geographical Coverage**

The survey covered a total of 340 selected rural villages from the National Master Sample<sup>4</sup> (NMS). The data for urban agriculture and large-scale farms'

---

production of a crop, two components are used, namely the area and the yield per unit area.

<sup>4</sup> National Master Sample (NMS) is a national framework for integrating and systematising conduct of household-based surveys by various Ministries and Institutions in Tanzania Mainland. The strength of the NMS lies on the organisational structure rather than on the statistical techniques employed to operate it. In other words it

surveys are presented in different reports. The reasons being due to the heterogeneity in nature of the agricultural activities taking place in urban areas and large-scale farms. Thus, different approaches are being applied to each survey. In each selected village, a sub-sample of 15<sup>5</sup> farming households was randomly selected with the overall sample size of 8,100 rural agricultural farming households.

#### **1.4.2 Subject Coverage**

The 1997/98 Integrated Agricultural Survey (IAS) covered the following subjects:

Household characteristics, holding characteristics, crops and sales of crops, sources of income, social amenities, storage, crop markets, credit facilities and farm practices.

#### **1.5 Authority of the Survey**

The 1997/98 Integrated Agricultural Survey was conducted under the Statistics' Act Articles II of 1961 that makes the individual information collected strictly confidential and the data to be used for statistical purposes only.

#### **1.6 Reference Period**

##### **Agricultural Year**

The agricultural year in Tanzania generally starts from October and ends in September of the following year. The reference period was therefore the agricultural year 1997/98. Vuli and Masika seasons were both involved.

**Long rains season (Masika)** normally runs from March to May. This season is experienced in most northern, northeast and Lake Zone regions of the country. Some of the data presented in this report relate to this season.

---

can be said that returns from the surveys to be carried out within the NMS will depend on the ability of the supporting staff to maintain it. This means that proper understanding of the work involved and commitment of the staff are important factors for the actual functioning of the NMS.

From the Census experience of 1993/94 and 1994/95 and the post enumeration surveys experience of 1995/96 and 1996/97, it was seen that the fifteen selected numbers of agricultural households has been found to be adequate to produce precise estimates. Any selection less than fifteen would not give precise estimates. On the other hand, larger sample size would increase survey costs without significant reduction in the level of sampling error. Hence, the sample of fifteen households per village has been found to be optimal.

**Short rains season (Vuli)** normally runs from October to January and is experienced in most northern, North east and lake zone regions of the country. Some of the data presented in this report relate to this season.

## **1.7 General Terms, Concepts and Definitions**

The general concepts and definitions given hereunder are those frequently and commonly used in the survey operations.

### **1.7.1 Primary Sampling Unit (PSU)**

This represents constant statistical area units identifiable by geographical boundaries and defined by physical features and important landmarks. The PSU for this survey was the village

### **1.7.2 Household and Holding**

#### **Household**

**A one-person household** is a person who occupies a housing unit and makes provision for his or her food or other essentials for living, without combining with other persons to form a multi person household.

**A multi person household** is a group of two or more people who occupy the whole or part of one housing unit and make joint provisions for food or other essentials for living. Domestic servants living in the same housing unit are included in a multi person household.

#### **Head of Household**

This is a person who is acknowledged by all other members of the household either because of his age or standing in the household as the head.

#### **Agricultural Holding**

Agricultural holding is an economic unit of agricultural production under single management. It consists of all land used for agricultural production without regard to title. For the purpose of this survey, the agricultural holdings were restricted to those having or operating at least 25 square meters of arable land. Thus, holding without land but had livestock only were not covered by the survey.

### **Holder**

A holder is a person who exercises management control over the operation of agricultural holding and who takes major decision regarding resource utilization or disbursement.

### **Agricultural Household**

An agricultural household is one where one or more of its members are holders. In peasant farming, there will normally be a one-to-one correspondence between the agricultural household and the holding. Holdings can however, also be operated by institutions, projects, etc.

#### **1.7.3 Holding characteristics**

##### **Field**

This is a continuous land cultivated as one piece by a holder, even if planted with different crops. An individual holding may consist of one or more such fields.

##### **Plot**

This is a portion of a field normally planted with one specific crop, such as maize sorghum or a crop mixture, like maize and bean's mixture.

##### **Planted Area**

This refers to total area where crops have been planted.

##### **Mixture**

This is a two or more crop planted simultaneously in the same field. The number, kind and proportion of crops in the mixture will generally vary according to the availability of seed, prevailing practices, soil, rainfall and other agro-meteorological conditions.

##### **Pure Stand**

This is a single crop cultivated in a field or plot.

##### **Agricultural Production**

This includes growing and production of different type of crops.

## **2.1 Determination of Sample Sizes<sup>6</sup>**

The sample size for the 1997/98 Integrated Agricultural Survey (IAS) was the same as the one used for the 1996/97 Expanded Agricultural Survey. In summary, the sample size was determined by using the following criteria, namely:-

- Detailed breakdown of the tabulation plan was prepared as requested by the data processing team.
- Effects of cost implications for designing a large sample both in terms of resources and non-sampling errors were considered.
- Acceptable level of sampling errors was prepared.
- Availability of organizational and operational infrastructure was in place.

Taking the above-mentioned considerations into account, a sample of 540 villages was selected using National Master Sample. Villages were used as Primary Sampling Units. These 540 Primary Sampling Units were seen to be sufficient to give precise estimates for most important variables both at national level and at regional level.

After the completion of the listing exercise, a sub sample of fifteen agricultural households were selected and surveyed. The rational of using fifteen randomly selected agricultural households came from the census experience of 1993/94 and 1994/95. Also, the post enumeration survey experience of 1995/96 and 1996/97 was used. The experience showed that, the fifteen selected agricultural households to be adequate to produce precise estimates. The results from the previous survey experiences showed that any selection less than fifteen do not give precise estimates. And, on the other hand, larger sample size selection would increase survey costs without significant reduction in the level of sampling error. Hence, the sample of fifteen households per village is found to be optimal.

<sup>6</sup>

Detailed break down of the estimation procedures is given in 'Technical Report National Sample Census of Agriculture, 1993/94, Volume I', 1996.

## **2.2 Calculation and Application of Sampling Weights<sup>7</sup>**

Since the Integrated Agricultural Survey was executed on a sample basis, sampling weights were used to get higher level aggregates.

The first and second stage selections of the revised rural module of the NMS were basically done with Probability Proportional to Size (PPS). The weights were essentially reciprocals of the probabilities of selection.

---

Detailed break down of the section on calculation and application of sampling weights is given in 'Technical Report National Sample Census of Agriculture, 1993/94, Volume I', 1996.

### **3.1 System Development**

The 1997/99 Integrated Agricultural Survey was processed based on the data processing system that was designed for microcomputer (DOS environment) based on IMPS (Integrated Microcomputer Processing System) software. The developed system covered procedures related to manual data editing, data entry and verification. Also, computer based editing, data organization, handling tabulation function activities and documentation.

The system had a number of manuals that served as reference materials for the training. The system development team was involved in the survey design to shape the survey so that it remains in compliance with the data processing system requirements.

### **3.2 Training of Personnel**

Data processing related training was given to different people involved in the survey. The aim was to acquaint the personnel with data processing requirements to improve the data quality.

The training preceded every stage of the operation. Before the survey began, the System Development and Data Processing team was given an opportunity to train the Regional and District supervisors' on data checking techniques (both manual and computer).

### **3.3 Questionnaire Receiving**

The processing of the Integrated Agricultural Survey data consisted of both manual and computer aided processes. The questionnaires from the field were orderly received and recorded into receiving logs to control and maintain the data flow. The personnel involved in the questionnaire receiving operation conducted the following tasks:

Receiving of all completed listing forms and questionnaires from the

regions.

- Recording the filled in forms and questionnaires, after making the necessary counts and checks, on provided logbooks.
- Shelving the forms and questionnaires for further processing and storage.

### **3.4 Manual Data Checking, Coding and Editing**

As part of the data handling and cleaning process, the team of Manual Data Checkers was formed. Main purpose was to check the duly-filled in questionnaires for completeness and correctness according to the established set of instructions. This process was meant to correct all illogical errors introduced into the data set during the field operation.

To achieve an effective and efficient implementation of the manual data checking tasks, manuals of instructions were prepared and training was conducted to the involved personnel. The manual data checking team performed duties along these lines:

- Checking all forms and questionnaires for geographical codes and names.
- Assembling the forms and questionnaires according to type and village thus making one batch for each village for data processing use and purposes.
- Checking each questionnaire (within one batch) for completeness, value ranges and consistencies.
- Editing and coding wherever necessary.
- Each batch, containing fifteen questionnaires, labeled and placed in provided envelope.

All these tasks were aimed to increase the quality and integrity of data according to the developed survey methodologies.

### **3.5 Data Entry and Verification Operation**

After manual data checking, well-batched questionnaires were passed to the Data Entry Operators (DEOs) for *data entry and verification*. This task was given a considerable importance to reduce possible human errors. Hence, computer entered data went through a 100% data verification to control possible data entry errors.

Data entry operators involved in the operation were trained on how to enter

and verify data based on the developed application programs.

### **3.6 Computer Screen Editing Operation**

After data entry and verification, data was subjected to computer editing through screen editing process. The process facilitated further editing and correction of survey data by using prepared computer programs. The System Development and Data Processing Team prepared the required computer programs. The base for preparing these programs was the detecting and displaying of possible logical errors in the data sets.

CONCOR Module was developed and programs were written and supplied by the subject matter specialists based on the editing and correction rules and procedures,

### **3.7 Data Organisation and Calculation of Sample Weights**

The screen-edited data was sorted, merged and organized accordingly into regional and national file(s) on the basis of the type of questionnaires. The process included checking for data mismatches. The data was collected from rural villages that had been sampled from the National Master Sample (NMS) frame and for that case each village has a sample weight and so is each sampled farming households.

The weight file was created for this purpose that was merged with the raw data at a later stage. These sample weights were applied at the tabulation stage to get weighted tables for regional estimates. The tabulation programs were written using CENTS (for tabulation) and CENVAR (for analysis of ratios) was used in producing the analysis ratios.

### **3.8 Data Archives and Documentation**

At the end of all the above detailed operations, data were archived into floppy diskettes and hard disks. Survey data processing procedures were compiled into one big document called "1997/98 Integrated Agricultural Survey, System Document." The document can work as a future reference material in case of any other similar survey system development, data processing and data dictionary.

#### **4.1 Introduction**

The 1997/98 Integrated Agricultural Survey (IAS) was carried out in rural areas of Tanzania Mainland as an annual data collection program. In this chapter the results will be discussed and a comparison be made from 1993/94 survey results to date. The discussion will be based on holdings' characteristics, crops, and sale of crops and sources of income. For easy understanding, statistical tables and graphs will be presented. The chapter comprises of two sections, the first section covers long rain (Masika) and the second covers short rain (Vuli). Also Masika and Vuli results shall be combined to obtain an aggregation of area and production for 1997/98 agricultural year.

##### **4.1.1 Type of Crops Grown**

Crops covered in this survey fall in four categories that is, mainly cereal crops, root and tuber crops, oil crops and cash crops. In 1997/98 agricultural season the cereal crops grown were maize, paddy, sorghum, bulrush millet, finger millets and wheat. Root and tuber crops grown were cassava, sweet potatoes, Irish potatoes, yams and cocoyams. Oil crops grown were sunflower, simsim, groundnuts, palm oil, coconuts, Soya beans and castor oil. Cash crops grown were cotton, tobacco, coffee and tea. Beans was the only type of legume grown.

##### **A: LONG RAINS SEASON (MASIKA)**

#### **4.2 Household and Holding Characteristics**

In the agricultural year 1997/98, the number of agricultural holdings in rural areas of Tanzania Mainland was 4,396,000 as compared to previous year that was 4,357,000. The estimate is 0.9% higher than the estimate obtained in 1996/97. Out of the estimated total holdings, about 3,043,000 (69%) grew crops only and 1,352,477(31%) had a combination of crops and livestock.,

**Table 01: Comparisons of Types of Agricultural Households 1993/94 - 1997/98<sup>8</sup>**

Type of Holding	NSCA 1993/94	NSCA 1994/95	EAS 1995/96	EAS 1996/97	IAS 1997/98
<b>Sample Size 540 villages</b>					
1. Crops Only	2,396,000 (65%)	2,432,000 (63%)	2,710,850 (65.3%)	2,895,800 (67%)	3,043,394 (69%)
2. Livestock Only	15,461 (0.42%)	13,902 (0.36%)	15,637 (0.4%)	47,800 (1%)	Not Covered
3. Crops and Livestock	1,279,051 (34.6%)	1,425,951 (36.8%)	1,420,239 (34.3%)	1,413,500 (32%)	1,352,477 (31%)
Total	<b>3,692,000 (100)</b>	<b>3,872,000 (100)</b>	<b>4,146,700 (100)</b>	<b>4,357,100 (100)</b>	<b>4,395,871 (100)</b>

Source: NSCA 1993/94, NSCA 1994/95, EAS 1995/96, EAS 1996/97 and IAS 1997/98

Table 01 shows the comparisons of types of agricultural holdings, from 1993/94 to 1997/98 agricultural years.

The result from the table shows that there have not been substantial changes of the number of holdings growing crops only over the past agricultural surveys and census. Likewise there have not been big changes of the number of holdings growing crops and raising livestock over the previous surveys.

Fig 1 below depicts the types of agricultural holdings in the 1997/98 Integrated Agricultural Survey. The percentage representation of holding with crops only and the holding with livestock and crops were 69% and 31% respectively.

<sup>8</sup> Each of the above mentioned censuses and surveys, the sample size selected was 540 villages from the National Master Sample.

**Fig. 1: Agricultural Holding By Type of Holding**

#### **4.2.1 Number of Agricultural Households**

There were about 4,396,000 agricultural households in 1997/98 agricultural season. The male-headed households were about 3,568,000 and female-headed households were estimated to be 828,000.

Table 02 below shows the comparisons of household characteristics from 1993/94 to 1997/98 Agriculture seasons.

The results from table 02 shows that the number of farming households increased from 3,692,000 in 1993/94 to 4,395,871 in 1997/98 an increase of 19%. This increase is higher compared to that of 1993/94 to 1996/97, which was 1%.

The result also shows that the number of male-headed households increased by 17% from 3,044,471 in 1993/94 to 3,568,032 in 1997/98. For female headed households the increase was 28% from 647,858 in 1993/94 to 828,374 in 1997/98.

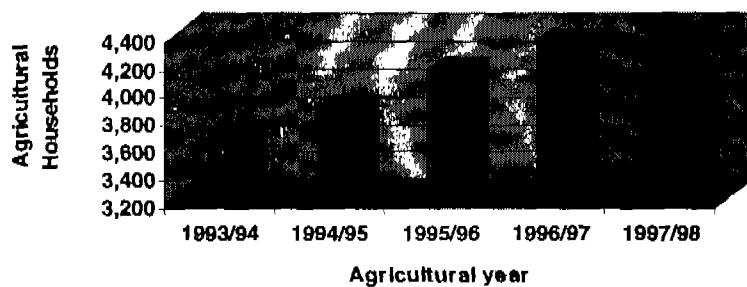

**Table 02: Comparison of Agricultural Household Characteristics 1993/94 - 1997/98**

<b>Variable</b>	<b>Agricultural Year</b>				
	<b>1993/94</b>	<b>1994/95</b>	<b>1995/96</b>	<b>1996/97</b>	<b>1997/98</b>
Number of Agricultural Household	3,692,000	3,871,2000	4,146,000	4,357,100	4,395,871
Average Household	5.42	5.42	5.30	5.29	Not Covered
Head of Household:					
Male	3,044,471	3,210,458	3,351,374	3,532,630	3,568,032
Female	647,858	661,868	795,352	824,523	828,374
% of female headed	17.5	17.1	19.2	18.9	18.8

Fig. 2 below gives the comparison of agricultural households between 1993/94 to 1997/98.

Fig. 2: Number of Agricultural Households 1993/94 - 1997/98

### 4.3 Agricultural Household Characteristics.

#### 4.3.1 Household Heads by Gender

From the estimated 4,396,000 Agricultural households, 3,568,000 (81%) households were male headed and 828,000 (19%) female headed. Female headed households growing crop only were 639,000 (15%) while those holding with crop and livestock were 189,000 (4%). Also female headed households with no formal education were 466,000 (11%) while those with formal education were 362,000 (8%). See Table 1-04, 1-05, 1-09 (Appendix A).

#### 4.3.2 Agricultural Households by Literacy

Out of the total 4,396,000 heads of households 2,845,000 had formal education and 460,000 had adult education. A total of 3,305,000 (76%) heads of household had formal and adult education whereas 1,091,000 (24%) had no education.

#### 4.3.3 Agricultural Household Heads By Occupation and Education

The estimated 4,396,000 agricultural households working on farm, 3,568,000 (81%) male headed households were involved in farm activities. They were distributed in different activities as follows:

Manager, administration and related workers were 6,700, professional and related worker 79,900, clerk 4,800, sales worker 8,100, office worker 4,900, peasant farmer 3,317,700, cattle herding and fishery 38,000, other agricultural worker 5,900, business 44,700, others 57,100.

Female headed households were 828,400 (19%) distributed in agricultural activities as follows:- manager, administrator and related workers were 2,100, professional and related workers 16,400, clerks 1,200, sales workers 910. Others include office workers 1,700, peasant farmers 791,700, cattle herding and fishery 4,500, other agricultural workers 2,900, business 4,300, and others 2,500, refer to Table 1-09.

and fishery 4,500, other agricultural workers 2,900, business 4,300, and others 2,500, refer to Table 1-09.

From the estimated agricultural heads of households, 4,109,000 (93%) were peasant farmer. Of the total peasants, 2,864,000 (70%) grew crops only whereas 1,246,000(30%) grew crops and raised livestock. Out of the total peasant farmers 791,700 (19%) were female heads of households.

Of the total peasant farmers, about 2,603,000 (63%) had formal education. Only about 448,000 (11%) had adult education. A total of 3,051,000 (74%) had formal education and adult education, whereas 1,058,000 (26%) had no education.

Of all peasant farmers, 828,000 (31%) were females. Out of these 362,000(44%) had formal education, whereas 466,000(56%) had no education. For reference see Appendix. A,

Table 1-10.

#### **4.4 Crops Grown On Holding.**

A total of 4,264,000 agricultural holdings were found to be growing crops, out of which 2,124,000 (50%) were growing three and more different crops.

About 1,320,000 (31%) agricultural holdings were growing two crops whereas 819,000 (19%) were growing one crop.

About 75% of all holdings that grew three and more difference crops had cultivated more than one hectare of land. Refer to Appendix A, table E2-03A for more details.

Morogoro is one of the regions with the highest 141,000 (17%) number of holdings growing only one crop on the holding, followed by Mwanza with 78,000 (10%) holdings. On contrary, Kagera had a greater number of agricultural holdings 264,000 (12.4%) which grew three and more different crops on the holding. Shinyanga followed this with 260,000 (12.2%) holdings. Kagera was the region with the fewest about 8000 (1-%) number of holdings with single crop (pure stand). Likewise, Morogoro was the region with the fewest 22,389 (1-%) number of holdings that grew three and more crops on the holding.

##### **4.4.1 Plots Grown to Crops**

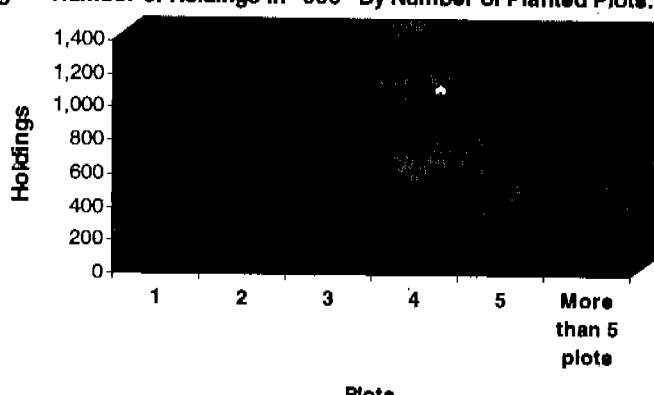

Table 03 shows the distribution of the number of holdings by cultivated plots. More than 60% of all holdings had operated between one and two plots. On the other hand, only 30% of all holdings had cultivated between three and four plots. Those who operated five (5) and above plots were only 7% of the total agricultural holdings.

**Table 03: Number of Holdings (000) by Number of Planted Plots.**

Number of Plots	Number of Holdings ("In 000")	Percentage
1	1,347	32
2	1300	31
3	852	20
4	428	10
5	190	4
More than 5 plots	147	3
<b>TOTALS</b>	<b>4,264</b>	<b>100</b>

Source : Appendix A, Table E2-09.

Figure 3 below shows the distribution of the number of agricultural holdings by number of planted area Refer to Appendix A, Table E2-09.

**Fig. 3: Number of Holdings In "000" By Number of Planted Plots.**

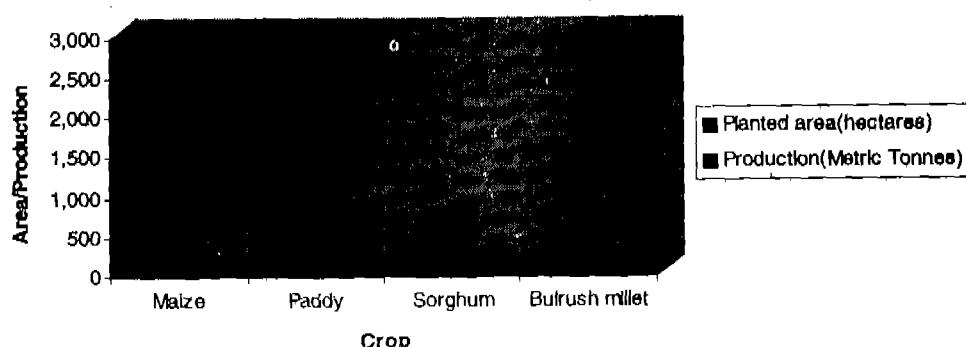

## 4.5 Crop Estimates

### 4.5.1 Plots Grown to Crops and Type.

There were 10,207,000 total plots grown to crops in all-4.264,000 agricultural holdings with planted area. About 9,236,000 (90%) of all plots were grown to more than one different crop. Only 10% of all plots were grown to pure stand.

When compared to the results of 1996/97 agricultural season. The number of holdings with one crop only decreased from 32% in 1996/97 to 19% in 1997/98 agricultural season. While, the percentage of holding with two crops increased from 27% to 31% from 1996/97 to 1997/98 agricultural seasons. The holdings that planted three and more crops increased from 40% in 1996/97 to 50% in 1997/98 agricultural season. The result shows that more than 80% of the holdings grew more than one crop.

**Fig. 4: Area ( In 000 ha.) and Production (In 000 mt.) of Cereal Crops**

#### 4.5.2 Planted Area and Production of Food Crops

About 7,182,000 hectares of land were cultivated to different crops 1997/98 (IAS). The average plot's size was 0.7 hectares. About 54% of all holdings operated 83% of all planted area to crops. These 54% holdings operated more than one hectare of planted area. Out of the total 7,182,000 hectares of planted area, 5,948,000(83%) hectares were under holdings with more than one hectare of planted area. Also, more than 50% of the planted area was under holdings with more than two (2) hectares. Reference is made to Appendix A, table E2 - 07A

Dodoma region had the largest plot size with average of 1.2 hectares. It was followed by Rukwa region that had an average plot size of 1.05 hectares. Although Kagera region was among the few regions with the highest number of plot's 1,015,000(10%), it was also noted that this is the same falling in the group of few regions with the lowest plot size of 0.47 hectares. See Appendix A, table E2 - 07B. Shiriwanga region had the largest cultivated area of 961,107(13%). It was then followed by Dodoma region with 681,000 (9.5%) hectares. Appendix A, table E2 - 08B

**Table 04      Area and Production of Cereal Crops.**

Type of Crop	Number of Holdings	Planted Area (hectares)	Production (Metric Tonnes)	Yield / Hectare (In kilograms)
Maize	3,641,000	2,581,356	1,626,429	630
Paddy	918,000	562,690	600,708	1068
Sorghum	875,000	597,482	198,298	332
Bulrush millet	272,000	261,783	48,486	185
Finger millet	191,000	76,139	-	-
Wheat	75,000	35,949	-	-
<b>Total</b>		<b>4,115,399</b>	<b>2,473,921</b>	<b>N/A</b>

Source: Appendix A, Table E4-9A to Table E4-9D.

The results in Table 04 show that maize was widely grown and contributed about 66% of the total production of cereal crops. Paddy contribution was 24% while sorghum contributed 8%.

#### **4.5.2.1 Maize**

Maize was mainly grown in Shinyanga, Iringa, Dodoma, Arusha and Mbeya regions. In the 1997/98 Integrated Agricultural Survey maize was grown by 3,641,000 holdings that is about 85% of all agricultural holdings of 4,263,720 with planted area. Out of the total 7,182,000 hectares of planted area to food crops, about 4,115,399 was planted to cereal crops. Area planted to maize was estimated to about 2,581,000 with Shinyanga region recording the highest planted area of 338,162 (13%) hectares, followed by Iringa with 320,270(12%) hectares.

Maize production was 1,626,000 tonnes, out of which Arusha region had the highest share of 228,880(14%) tonnes, followed by Iringa 223,000 (13%) and Ruvuma 161,000 (10%).

#### **4.5.2.2 Paddy**

Paddy was grown mainly in Shinyanga, Morogoro, Mwanza and Tabora regions. A total of 917,600 holdings grew paddy. Out of these 146,000 (16%) were female headed households. About 563,000 hectares of cultivated land was grown to paddy.

There were about 601,000 tonnes of paddy produced. The main paddy producing regions were Shinyanga (36%), Mwanza (18%) and Tabora (15%).

#### **4.5.2.3 Sorghum**

Sorghum was planted on 597,000 hectares with production of 198,000 tonnes. The main regions reported to have grown Sorghum includes Shinyanga (22%), Dodoma (21%) and Singida (16%) of the total planted area to Sorghum.

#### **4.5.2.4 Legumes (Beans)**

The type of legume grown were beans that were planted in 462,000 hectares and the production was 156,000 tonnes.

#### 4.5.2.5 Root and Tuber Crops

**Table 05. Distribution of Planted Area By Type of Crop**

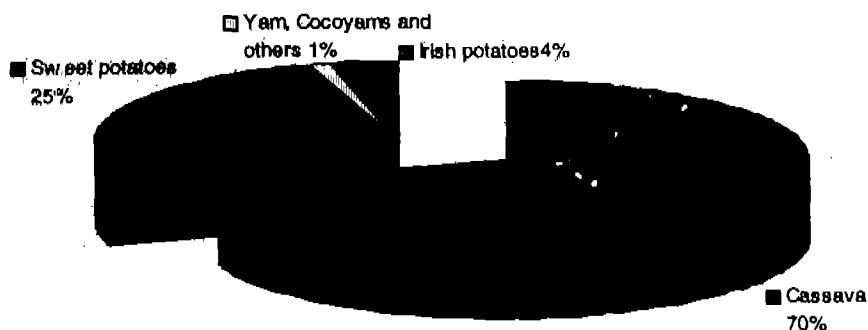

Type of crop	Planted area (Hectares)
Cassava	721,655
Sweet potatoes	257,220
Irish potatoes	36,632
Yam, cocoyams	11,486
Others	297
<b>Total</b>	<b>1,027,290</b>

Source: Appendix A, Table E2-12B.

Table 05 gives the distribution of planted area by type of crop. From the table Cassava was widely planted and covered 721,655 ha. (70%) of the total planted area of root and tuber crops. Sweet potatoes covered 257,220 ha.(25%) while Irish potatoes covered 36,632 ha,(4% ) of the total planted area.

Figure 5 shows the distribution of planted area with roots and tuber crops. Cassava has the dominates the areas planted with roots followed by sweet potatoes, Irish potatoes and yams and others.

**Fig. 5 PLANTED AREA WITH ROOTS AND TUBER CROPS**

#### 4.5.2.6 Planted Area With Oil Crops

Table 06 shows the distribution of planted area by type of oil crop. The table show that groundnut is widely grown and covers 41% of the total area under

oil crops followed by Cashewnuts 32% and Sunflower 15%. While Coconuts contributed 7% and Simsim 4%.

**Table 6: Distribution of Planted Area by of Oil Crop**

Type of Crop	Planted Area (ha)
Groundnuts	202,343
Cashewnuts	157,505
Sunflower	80,676
Coconuts	33,435
Simsim	20,794
Other	4,125
<b>Total</b>	<b>498,878</b>

Source: Appendix A, Table E2-11C.

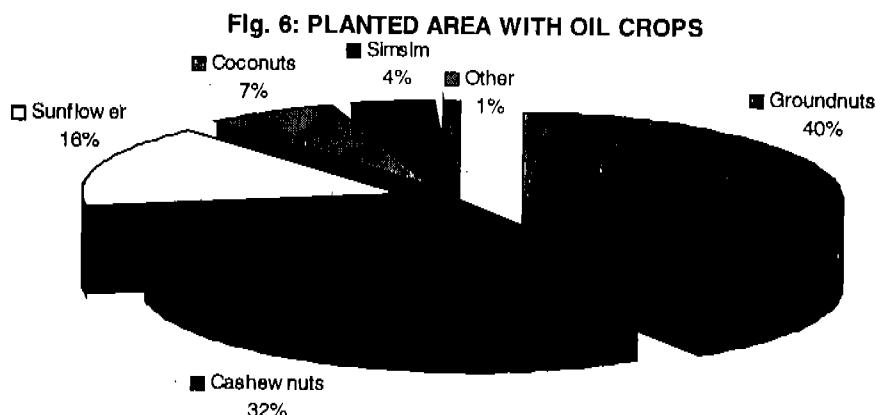

Figure 6 below shows the percentage distribution of planted area by type of oil crop.

#### 4.6 Planting Methods, Use of Fertiliser, Storage, Chemicals, Marketing, Credit Facilities and Source of Income.

##### 4.6.1 Farming Practices

For the purpose of this survey, farming practices include, among others:

➤ **Planting Methods.**

There were mainly three methods of planting practised by farmers. These are broadcasting(24%), row plant by planter(1%) and row plant by hand(60%). Other methods were used by 15% of the holdings. Appendix A, table E5 - 05B

➤ **Use of Fertiliser**

The use of fertilizers reported is mostly for food crops. The holdings reported using fertilizers were 1,475,965 (35%). Out of these 446,242 (10%) used chemical fertilizers, 819,567 (19%) used manure, 78,993 (2%) used compost manure, 128,757 (3%) used a combination of chemical and compost manure 3% and about 2,406 holdings used other types of fertilizers. For more details see Appendix A, Table E5-02.

It was observed that 2,908,000 (68%) of holdings were unable to use fertilisers due to some reasons. Among the reasons given were

- too expensive 27%,
- did not know how to use 4%,
- destroy soil fertility 4%,
- not available 25%,
- other reasons for not using fertilisers were 8%.

For more details see Appendix A, Table E5-03.

Ruvuma region had the highest 28% usage of fertilizer, followed by Iringa region 21%, Mbeya region 17% and Tabora with 15% of all chemical fertilizers used.

➤ **Storage**

Different storage facilities were used for different crops. The farm produce was found to be stored mainly in local store, modern stores and in sacks (bags). About 65% of holders used local storage facilities, modern stores were used by 1% and storage in bags at home was by 64% of all holdings.

*Note: Some of the holders reported the use of two or more methods but the mainly one was reported.*

Out of the total holdings reported to have grown maize, 73% reported to have stored their crop. Only 23% of all holdings stored their crop for more than six (6) months.

About 608,800(66%) holdings that grew paddy reported to have stored the crop. About 40% of the holders reported to have stored the crop for more than six (6) months. Other crops reported to be stored were sorghum, Bulrush Millet, Finger Millet, Wheat and Beans. The duration of storage ranges from less than three months to more than six months.

#### **4.6.2 Marketing of Produce**

There were 2,111,000 (59%) households that reported to have sold their produce through different markets. Majority of the holdings (31%) sold their produce to private businesspersons. However there were marketing problem reported. About 1,259,000 (29%) holdings reported to have faced different marketing problem. The main marketing problems reported were that of low price, poor roads, transport, lack of market, no grain bags.

#### **4.6.3 Credit**

Very few farmers were able to secure credits from different sources. Only 4% received credit with cash or in a form of inputs. The main sources of credit were observed to be individual and private companies. However, out of 4,217,000 holders who could not acquire credits 3,063,000 (70%) reported to have failed due to lack of creditors.

#### **4.6.4 Sources of Income**

The main source of income for small holders are through the sale of crops followed by business, and then sales of livestock and livestock products. The results show that from the above mentioned source of income, the main beneficiaries are those having planted area of one acre and above, especially those having between two and five acres. For more details see Appendix A, Table E5 –13 and 14.

## **B. SHORT RAIN SEASON (VULI )**

### **4.7 Households and Holding Characteristics**

The 1997/98 Short rains (Vuli) season involved 1,900,000 agricultural holdings and planted 1,259,900 hectares. The regions under Vuli season include Arusha, Kilimanjaro, Tanga, Morogoro, Pwani/Dar-es-Salaam. Others are Ruvuma (some areas of Mbanga District), Mbeya, Kigoma, Mwanza and Mara.

#### **4.7.1 Crops Grown**

The main serial crops grown during the 1997/98 Vuli season were Maize, Paddy, Sorghum, Bulrush millets and Wheat. Roots and Tuber crops were Cassava, Sweet potatoes, Irish potatoes, Yam and Cocoyams. The oil crops grown were Sunflower, Simsim, Groundnuts, Palm oil, Coconuts, and Cashewnuts. Also cash crops grown were Cotton, Tobacco, Coffee and Tea.

#### **4.7.2 Area Under Food Crops**

About 1,259,873 hectares of land were planted to different cereal crops. These crops include: Maize 777,570 hectares, Paddy 175,454 hectares, Sorghum 94,363, Bulrush millet 3,384 hectares and beans 209103 hectares.

Apart from the above mentioned crops, there were some other crops grown such as Wheat, Sweet potatoes, Irish potatoes, Yams, etc.

#### **4.7.3 Maize**

Maize is the main cereal crop grown in Tanzania Mainland for both long and short rains' seasons. During the short rain seasons (Vuli), Maize was grown in 777,570 hectares in the regions of Mwanza (24%), Tanga (17%), Morogoro (13%), Kigoma (10%). Other regions planted less than 10% of the total planted area to maize. About 446,341 tonnes of maize were produced during this season. Mwanza, Kilimanjaro, Tanga, and Mbeya produced 58% of the total produce of maize.

#### **4.7.4 Paddy**

Paddy is the second main cereal crop grown in Tanzania mainland. During short rains season the crop was grown in 175,454 hectares of land with Mwanza having planted more than 84% of area. Other regions that grew paddy include Kilimanjaro, Tanga, Morogoro, Coast/DSM and Mara. Total paddy produced during Vuli was 245,843 tonnes with Mwanza producing about 95%.

#### **4.7.5 Other Food Crops**

Other cereal crops grown in short rain's season were sorghum, bulrush millet and beans.

Sorghum was mainly grown in Mara region, followed by Mwanza. Bulrush millet was mainly grown in Mwanza.

Bean was grown in 267,440 hectares, was mainly grown in Kagera, Ruvuma, Kigoma and Kilimanjaro regions. See Appendix A, Table V4 – 09E.

**Table 8: Planted Area and Production By Type of Crop.**

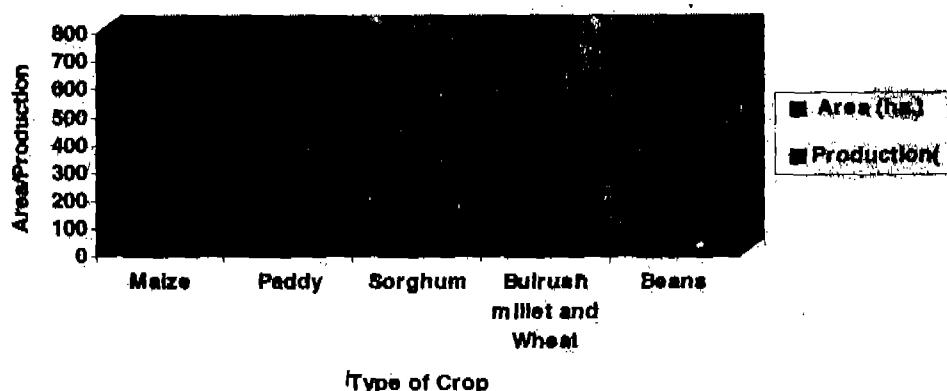

Type of Crop	Planted Area (hectares)	Production (Metric Tones)	Yield/Hectare (In Kilograms)
Maize	777,570	446,341	574
Paddy	175,454	245,843	1,401
Sorghum	94,363	50,436	534
Bulrush millet	3,384	1,742	514
Beans	267,440	99,560	372
<b>Total</b>	<b>1,259,873</b>	<b>843,922</b>	<b>N/A</b>

Source: Appendix B, Table V4-09A to Table V4 - 9E.

The result shows that during short rain season (Vuli) about 1,259,873 hectares were planted with main food crops. The area and production per crop are shown in table number 8 above.

Figure 8 shows the distribution of area and production by type of crop

**Fig. 8: Area (In 000 ha.) and Production (In 000 mt) By Type Crop**

**C: LONG RAINS (MASIKA) AND SHORT RAINS (VULI) COMBINED RESULTS**

**4.8 Combined Results for 1997/98 Long Rains (Masika) and Short Rains (Vuli).**

**Table 9: Planted Area and Production for Vuli and Masika seasons 1997/98**

<b>Crop</b>	<b>PLANTED AREA (Hectares)</b>			<b>PRODUCTION (Metric Tones)</b>		
	<b>Masika</b>	<b>Vuli</b>	<b>Total</b>	<b>Masika</b>	<b>Vuli</b>	<b>Total</b>
Maize	2,581,356	777,570	3,358,926	1,626,429	446,341	2,072,770
Paddy	562,690	175,454	738,144	600,708	245,843	846,551
Sorghum	597,482	94,363	691,845	198,298	50,436	248,734
Beans	462,216	209,103	671,318	156,657	99,560	256,217
B/Millets	261,783	3,384	265,167	48,486	1,742	50,228
<b>Total</b>	<b>4,465,527</b>	<b>1,259,873</b>	<b>5,725,400</b>	<b>2,630,578</b>	<b>843,922</b>	<b>3,474,500</b>

Source: Appendix A, Table E4-9A to Table E4- 9D and Appendix B, Table V4-9A to V4- 9E.

Total planted area and production for rain fed main food crops (for Vuli and Masika season) is given in table 9. In this survey Irrigation was not considered. The results show that 20% of the total planted area was under short rain season, while the remaining 80% were planted during long rains season.

Production results show that 24% of the total production was obtained from short rain's season, where as long rain season contributed 76%.

When the 1997/98 results are compared with that of 1996/97 it is observed that Masika remains the main dependable season for agricultural production. Previous censuses and surveys have shown that Vuli contributed less than 30% of the total annual production.

#### 4.8.1 Comparison of Results (Area and Production between 1993/94 to 1997/98)

**Table 10: Comparisons of Total Planted Area and Production of Main Cereal Crops.**

Agricultural season	Total Planted Area (hectares)	Total Production (Metric tones)
1993/94	2,574,400	2,242,000
1994/95	3,348,010	3,619,525
1995/96	3,897,278	3,701,176
1996/97	3,696,563	3,591,266
1997/98 <sup>9</sup>	5,783,738	3,474,500

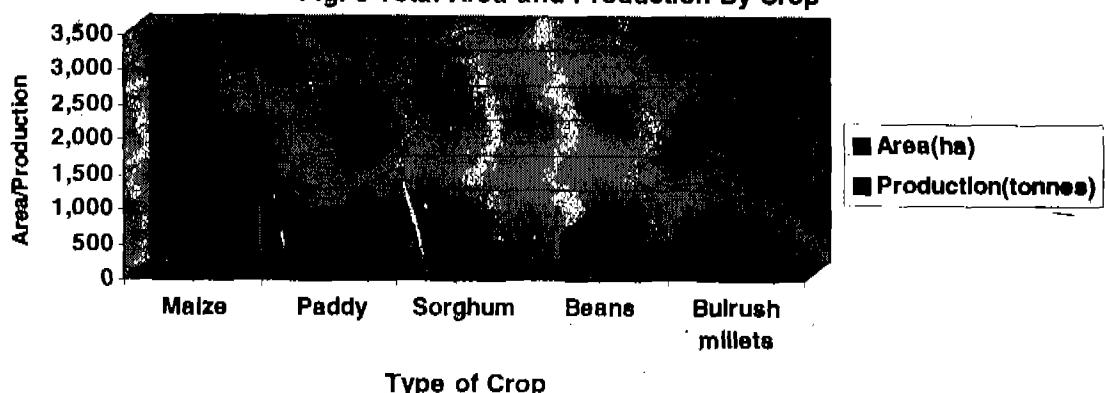

Source: 1993/94 NSCA Volume III Report, 1994/95 NSCA Volume III Report, 1995/96 EAS Report and 1996/97 EAS Main Report.

The data in table shows that there is average growth rate of 24% total planted area. Planted area decreased from 3,897,278 hectares in 1995/96 to 3,696,563 hectares in 1996/97. Thereafter, planted area increased to 5,783,738 hectares in 1997/98-crop season.

---

<sup>9</sup> Note: In 1997/98 interview method was used instead of objective measurement method. Using the experience of 1995/96 and 1996/97 Expanded Surveys and comparing the results obtained by objective measurement method and interview method, it was discovered that the two methods do not differ much in the results. Though, it was found that farmers have the tendency of slightly overstating the area planted to food crops and understating the production. The differences are not much - hence the decision to use interview method. Also, the El – Nino rains of 1997/98 agricultural season favoured crop production especially paddy even though infrastructure was destroyed. For more details on production refer to table 11.

Fig. 9 Total Area and Production By Crop

**Table 11: Planted Area (In '000' hectares) and Production (In '000' tones) of Selected Crops 1993/94- 1997/98.**

Agricultural Year	Variable	Crop				
		Maize	Paddy	Sorghum	B/Millet	Beans

	Average Yield(Kg/ha)	617	1,147	359	189	351

Source: 1993/94 NSCA Volume III Report, 1994/95 NSCA Volume III Report, 1995/96 EAS Report, 1996/97 EAS Main Report and Appendix A, Table E4-9A to Table E4- 9D and Appendix B, Table V4-9A to V4- 9E.

## **5.1 General Overview**

The 1997/98 Integrated Agricultural Survey was done in 540 selected rural villages from NMS. The resident extension staffs of the selected villages were used in the execution of the survey and District and Regional Supervisors mostly did supervision. Supervision from headquarters was minimised in order to reduce cost and sustainability.

To undertake such a big survey there are always achievements and problems accruing. Such achievements and problems are explained in this part of the report.

## **5.2 Conclusions**

### **Co ordination of Agricultural Statistics Producers**

Continuation of co ordination between the Ministry of Agriculture and the NBS (Planning Commission) continued by rationalising the agricultural statistical information system in the country to ensure cost-efficiency, increase accuracy and consistency in data production.

The Integrated Agricultural Survey activities were jointly conducted and resources of both institutions were pooled together. All these had a remarkable impact on the success of the operation. Therefore, it can be concluded that the co ordination is in place and expected to continue even in the planned future annual surveys.

### **Meeting the Integrated Agricultural Survey Objectives.**

The Integrated Agricultural Survey was conducted with six objectives in mind. It can be concluded that the survey achieved present objectives as follows:

- Time series data for improving current food and livestock at national and regional levels were collected.
- Basic data to be utilised in the preparation, formulation of policies and implementation of agricultural and livestock plans were obtained;
- Basic statistics for comparing population increase and development of the agriculture sector were obtained;
- Data which will help in carrying out future surveys and censuses were collected;

- A base for an agricultural statistical database was established;
- Detailed data on various inputs used for agricultural production, such as type of fertilisers, pesticides, improved seeds was obtained etc.

In addition to the above objectives, another important objective achieved was that of developing a national capability to build, manage and sustain an efficient agricultural statistical system in the country.

### **5.3 Data Processing**

Two national staff was sent for training abroad to built capacity in data processing activities.

### **5.4 Problems Faced and their Solutions.**

- Most of the motorcycles used by district supervisors were out of order, thus supervision work were somehow hampered.
- To sole the problem new motor cycles were ordered and are expected to arrive any time before the completion of the survey.
- The number of days for supervision and fuel allocated to both District and Regional supervisors were inadequate.
- Increasing the number of days for supervisors solved the problem.
- There was partial involvement of both district and regional authorities during the field operations of the survey operations. Their involvement was at the initial stages of the field preparation. This was due to financial constrains. In future, all district and regional authorities to be fully involved in the survey activities.
- Identification of the boundaries of the selected villages as they were in the 1988 population census was difficult to be located. Involving the village, ward and divisional leaders in identification of the boundaries as they were in 1988 population census solved the problem.

### **5.5 None and Partial Respons**

None and partial responses due to death and shifting of the sampled households after the survey had started during which the replacement in the field was not allowed. Partial responses were due to memory decay and refusal. Manual Data Checking and Editing and Computer Hot Deck Imputation method with advises from subject matter and sampling experts respectively solved these problems.

### **5.6 Data Limitations**

The scope and coverage brings about the limitation of the usage of data of the Integrated Agricultural Survey. As mentioned earlier, data were collected

using the scheme (A+B) of the NMS, which gives estimates at the regional level. If data was to be collected to give data for district estimates, using Scheme (A+B+C) of NMS would require more resources, which the government could not manage immediately. This is a serious limitation because the demand of data at district level, which is needed for lower level planning, is increasing.

Data on large-scale farms and urban agriculture surveys are not included in this report as they are covered in separate reports.

### **5.7 Recommendations**

For future survey implementation, it is recommended that for similar surveys:

- Allocating enough fuel should strengthen supervision.
- The regional and district authorities should be fully involved in the implementation of field activities from the early stages to the end.
- The Government of Tanzania should conduct the population and housing census so that a new frame, which is a basis of conducting other surveys, be in place. This will solve village boundary identification.
- Since MAC and NBS are working in close collaboration with Statistics Department of the University of Dar es Salaam, there is need to include University Staff in the initial stages of planning and training of the supervisors and enumerators during survey preparation.

# APPENDIX A:

## TABLE OF RESULTS: Masika

Table 1-01: Number of Agricultural Households\*  
by Type of Holding by Region

## **2.0 AINA YA SHAMBA. (Jaza geresho linalostahili kwenye kisanduku)**

1. Mimea ya mazao tu \_\_\_\_\_
2. Mimea ya Mazao na Mifugo \_\_\_\_\_
- 2.1 Mbali na shughuli za kilimo zinazofanyika katika kaya hii, ni shughuli ipi iliyominjamu muhimu zaidi ya kluchumi inayafanyika ili kuongeza kipato cha kaya kifedha?
- 1 Hakuna \_\_\_\_\_
  - 2 Kuvua samaki \_\_\_\_\_
  - 3 Kupanda miti ya misitu \_\_\_\_\_
  - 4 Kupasua mbao \_\_\_\_\_
  - 5 Biashara ndogo ndogo \_\_\_\_\_
  - 6 Useremala \_\_\_\_\_
  - 7 Kutengeneza/kuuza pombe za kienyeji \_\_\_\_\_
  - 8 Kutengeneza/kuuza sanaa (vinyago, vikapu, n.k.) \_\_\_\_\_
  - 9 Nyingine (taja) \_\_\_\_\_

## **3.0 MAKADIRIO YA MAVUNO (MSIMU WA MASIKA)**

- 3.1 Je ulivuma mazao yoyote msimu wa masika?

- 1 Ndiyo \_\_\_\_\_
- 2 Hapana (nenda 3.3) \_\_\_\_\_

- 3.2 Mazao yaliyovunwa msimu wa masika?

Zao	Geresho	Vipimo vya Kienyeji		Kipimo kimoja ni sawa na kilo ngapi?	Jumla ya mavuno katika kilo
		Jina	Idadi		
(1)	(2)	(3)	(4)	(5)	(6)

Nenda (4.0)

3.3 Ni sababu ipi kuu iliyofanya mazao yaliyotajwa mwanzo yasivunwe ?

- 1      Ukame
- 2      Mafuriko
- 3      Mazao yaliharibiwa na wanyama
- 4      Mazao yaliharibiwa na wadudu/ndege
- 5      Mengine (taja) -----

#### 4.0 MATUMIZI YA UTAALAMU WA KILIMO

4.1 Je ulitumia mbolea za viwandani au samadi katika mashamba yako?

- 1      Ndiyo
- 2      Hapana (nenda 4.4)

4.2 Ulitumia mbolea ya aina gani?

- |                              |                                     |
|------------------------------|-------------------------------------|
| 1      Chumvichumvi          | 2      Samadi                       |
| 3      Mboji                 | 4      Chumvichumvi na Samadi/Mboji |
| 5      Nyingine (taja) ----- |                                     |

4.3 Ni kiasi gani cha mbolea za chumvichumvi ulichotumia?      Kilo -----

4.4 Kwa nini hukutumia mbolea?

- |                                  |                               |
|----------------------------------|-------------------------------|
| 1      Ghali saha                | 2      Sijui namna ya kutumia |
| 3      Inaharibu rutuba ya ardhi | 4      Haikupatikana          |
| 5      Nyingine (taja) -----     |                               |

4.5 Ulitumia njia gani kupanda mbegu shambani mwako?

Zao	Geresho la zao	Geresho la njia iliyotumika
(1)	(2)	(3)

#### Geresho za Saflwima 3

- 1      Kusia (Broadcast)
- 2      Mashine ya kupandia
- 3      Kupanda kwa mstari kwa mkono
- 4      Nyingine (taja) -----

#### 5.0 HIFADHI YA MAZAO

5.1 Je, unahifadhi mazao yako?

- 1      Ndiyo
- 2      Hapana (nenda 6.0)

5.2 Aina ya mazao	Geresho	5.3 Aina ya ghala 1 Kienyeji 2 Ghala la kisasa 3 Nyumbani kwenye magunla	5.4 Unahifadhi mazao kwa muda gani? 1 Pungu fu ya mlezi mitatu 2 Mlezi mitatu hadi sita 3 Zaidi ya mlezi sita
(1)	(2)	(3)	(4)

5.5 Je unakinga mazao yako yasishambuliwe na wadudu yakiwa kwenye ghala?

- 1 Ndiyo
- 2 Hapana (nenda 6.1)

5.6 Unatumia mbinu gani kukinga mazao yako?

- 1 Madawa ya kisasa
- 2 Madawa ya kienyeji

## 6.0 MAUZO YA MAZAO YA KILIMO

6.1 Uliuza mazao yoyote msimu huu?

- 1 Ndiyo
- 2 Hapana (nenda 7.0)

6.2 Je, katika msimu huu wa kilimo ni wapi uliuza zaidi bidhaa zako za kilimo?

- 1 Niliwauzla majirani
- 2 Maduka ya hapa kijijini
- 3 Chama cha Ushirika
- 4 Soko la hapa Kijijini
- 5 Soko la mjini
- 6 Wafanyabiashara binafsi
- 7 Nyingine (taja) \_\_\_\_\_

6.3 Ulipata matatizo yoyote ya kuuza mazao yako msimu huu?

- 1 Ndiyo
- 2 Hapana (nenda 7.1)

6.4 Ni matatizo gani uliyapata wakati wa kuuza mazao yako?

- 1 Barabara mbovu
- 2 Hakuna usafiri
- 3 Hakuna mnunuzi
- 4 Hakuna magunia
- 5 Bei ndogo
- 6 Mengine (taja) -----

## 7.0 UPATIKANAJI WA MKOPO

7.1 Je, ulipata mkopo wowote wa kilimo msimu huu?

- 1 Ndiyo
- 2 Hapana (nenda 7.4)

7.2 Aina ya mkopo

- 1 Fedha taslimu
- 2 Pembejeo
- 3 Fedha na Pembejeo
- 4 Nyingine (taja) -----

7.3 Chanzo na kiasi cha mkopo uliopatikana

Na	Chanzo	Thamani ya mkopo (Tshs)
(1)	(2)	(3)
1	Watu/Kampuni binafsi	
2	Serikali	
3	Benki	
4	Chama cha ushirika	
5	NGO's	
6	Kagine (taja) -----	

7.4 Ni sababu zipi zilizofanya usipate mkopo wowote wa kilimo msimu huu?

- 1 Sikuhitaji
- 2 Hakuwepo mtoaji
- 3 Riba ilikuwa kubwa sana
- 4 Nyingine (taja) -----

## 8.0 CHANZO CHA MAPATO

8.1 Ni kipi kilikuwa chanzo kikuu cha mapato katika kaya yako msimu huu wa kilimo?

- |                                    |                               |
|------------------------------------|-------------------------------|
| 1 Mauzo ya mazao                   | 5 Zawadi/msaada (Remittances) |
| 2 Mauzo ya mifugo/bidhaa za mifugo | 6 Kingine (taja) -----        |
| 3 Mshahara                         |                               |

## GERESHO ZA MAZAO

### Nafaka:

11. Mahindi
12. Mpunga
13. Mtama
14. Uwele
15. Ulezzi
16. Ngano
17. Shayiri
31. Maharagwe
32. Kunde
33. Choroko
34. Mbazi
35. Dengu
36. Njugu mawe
37. Njegere

### Mazao ya Biashara:

50. Pamba
51. Tumbaku
52. Pareto
53. Mkonge
54. Kahawa
55. Chai
56. Kakao
57. Mpira
58. Miwati
59. Sufi
60. Miwa
61. Iiliki
62. Jute
71. Ndizi
73. Maembe
74. Papai
75. Mananasi
76. Machungwa
77. Madalanzi
78. Zabibu
79. Machenza
80. Mapera
81. Plums
82. Ma-Apple
83. Pears
84. Peaches
85. Ndimu/Limao

### Jamii ya Kunde:

### Matunda:

86. Kabechi/Chinese
87. Nyanya
88. Spinachi
89. Caroti
90. Pilipili
91. Mchicha
92. Boga
93. Tango
94. Biringanya
95. Matikiti
96. Coliflower
99. Mazao mengine

### Mizizi na Tyuba:

21. Muhogo
22. Viazi vitamu
23. Viazi mviringo
24. Magimbi
25. Viazi vikuu
26. Vitunguu
27. Tangawizi
41. Alizeti
42. Ufuta
43. Karanga
44. Mawese
45. Nazi
46. Korosho
47. Maharagwe ya Soya
48. Nyonyo

### Mazo ya Mafuta:

Jina la Mjazaji: \_\_\_\_\_ Tarehe: \_\_\_\_\_ Sahihi: \_\_\_\_\_  
Jina la Msimamizi: \_\_\_\_\_ Tarehe: \_\_\_\_\_ Sahihi: \_\_\_\_\_  
Jina la Mkariki: \_\_\_\_\_ Tarehe: \_\_\_\_\_ Sahihi: \_\_\_\_\_
